

## The Pivot.City<sup>SM</sup> Hybrid GPT Lite Paper

Hypothesis: Pivot.City Hybrid GPT increases the capacity of ecosystems and the ability of entrepreneurial resource partners to better identify capacity, strengths, and weaknesses throughout the innovator’s journey.

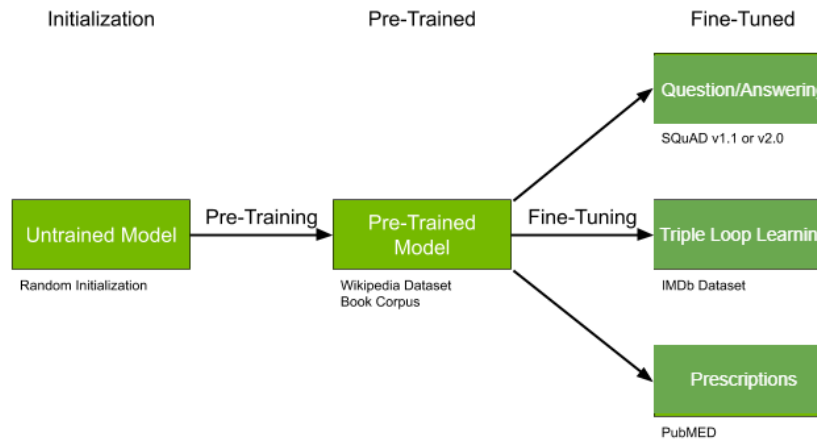

- Hypothesis: Pivot.City Hybrid GPT significantly enhances the decision-making process of entrepreneurs by providing personalized, data-driven insights and recommendations, leading to improved business outcomes such as increased revenue, cost reduction, or enhanced operational efficiency.
- Hypothesis: Pivot.City Hybrid GPT enables a new form of risk assessment leading to more informed lending decisions, reduction in fraud, improved cash flow management, financial education resources, and opportunities for customized financial products.
- Hypothesis: Pivot.City Hybrid GPT expands ecosystem capacity and social infrastructure.

The Innovator’s Journey Unified Modeling Language (UML) has served as a functional decomposition framework for entrepreneur support: call-to-innovate, start, descend, ascend, unify, and return. Over time the interactions within the framework established a range of recursive tasks. Those base cases form individualized algorithmic prescriptions to help entrepreneurs pivot.
